CASTLE

by

IDA L. HILDEBRAND

CASTLE COLLECTION ranges planters made of sand casted solid aluminium, created to last for centuries. Uniquely casted by hand – one mould for each item produced, carefully crafted into timeless elegance according to traditional methods.

CASTLE is a new interpretation of the classic antique vase. Created with sculptural minimalist simplicity and characterized by timeless and exquisite detailing. The sophisticated bowl is elevated to emphasize the beautiful shape and the clean lines.

The lavish details provide an exclusive planter which contributes to create a perfect atmosphere for both residential and landscaping environments.

CASTLE is made of 100% recycled solid aluminium. The material is extremely durable, lightweight and maintenance-free. A large amount of sand is used in the casting process which is being re-used in production. The capabilities of aluminium are ideal for plants. The aluminium itself transfer temperatures from hot to cold and the other way around, which creates a good environment for the plants.

THE CASTLE COLLECTION is available in different sizes. For indoor or outdoor use, with optional drainage.

The planters are available in RAW aluminium or powder coated with a super durable and UV resistant treatment – highly suitable for sunny environments.

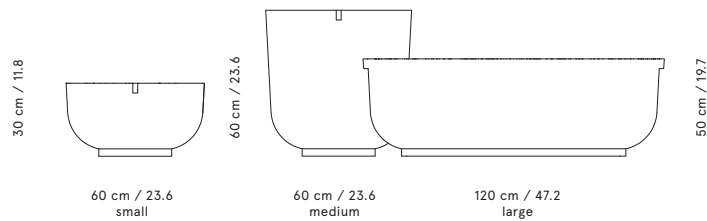

The genuine blasted textured finish age beautifully. Marks such as smaller cavities and collections of sand from the mould can occur and is considered a natural part of the traditional process.
